BEST AVAILABLE IMAGES

Defective images within this document are accurate representations of the original documents submitted by the applicant.

Defects in the images may include (but are not limited to):

- BLACK BORDERS
- TEXT CUT OFF AT TOP, BOTTOM OR SIDES
- FADED TEXT
- ILLEGIBLE TEXT
- SKEWED/SLANTED IMAGES
- COLORED PHOTOS
- BLACK OR VERY BLACK AND WHITE DARK PHOTOS
- GRAY SCALE DOCUMENTS

IMAGES ARE BEST AVAILABLE COPY.

**As rescanning documents *will not* correct images,
please do not report the images to the
Image Problem Mailbox.**

Appendix A

Wednesday, February 04, 2004

Description of SIS-Ex for patent works.

Content is stored on server "A" (1) with a specific UFN the describe the file properties (2). At any given time the owner of "A" may wish to publish the content with certain restrictions (such as "valid till", security check, licensing, pay-per-view etc.

The owner modifies the UFN by selecting a set of conditions and commerce information that are translated into codes and stored as an extension of the UFN (3).

The media is than published (4) and potential viewers are provided with electronic agreement or token (5) and an image with the SISEx-UFN properties is sent to sever "B" (6). Note: the actual media file is not transferred to server "B" thus all issues of security and protecting the intellectual properties are eliminated.

The owner / authorized users can then integrated the SISex content into any multimedia presentation (7). Upon request of the player on the audience device (8) the call to the SIS-Ex content is routed to server "A" (9).

A process of validation, security and counter is performed (10) and, if validated, the media is provided from server "A". Note: in this particular example, if the validation fails, the audience views media items A, C & D (7) only.

If a licensing or commerce method applied in the agreement (5) than the counter pass the information to the billing process (11) for direct payment or a 3rd party processing service ,such as credit card processor (12)

Storyboard system

SiSTeR's storyboard system saves time and video production cost by enabling all parties involved with the production (client, producer, director, cameramen, editors etc.) to communicate electronically and pass interaction set to the editing software and hardware.

The parties (1) are using computing devices and cell phones to communicate back and forth by exchanging instruction sets (2) via the M-Plat (3). Once the final draft is agreed upon the project instruction set (4) is send to the editing system (5). The editing system pulls the media files automatically and the editor, saves to final output to local device or directly to the distribution system using the *UPLOADER*.

The editing system pulls the media files automatically and the editor, saves to final output to local device or directly to the distribution system using the *UPLOADER*.

Example of SIS-Ex store.

CATALOG = Selected clips from a library for sale or licensing
STORE = A subst (manually selected) from a catalog.
POS = A store with SISEX rules defined for each clip.
Contract = Shopping cart that has been paid for

SIS-Ex

- Step 1.**
A media file is stored with standard UFN.
- Step 2.**
The SIS-Ex information is added and a copy of the SISCommands is stored.
